

NEFF N30 13 Amp - 4 Zone Induction Hob (T36CA50X1U)

This entry level induction hob from Neff is a great choice if you are replacing a gas hob, it can run off a standard 13 amp socket and does not require a dedicated cooker circuit. It uses a clever system of power-sharing and quickly switches the power between the cooking zones. If you are using more than one cooking zone, then you will see that it takes a little longer for them to get to temperature compared with a hard-wired 'full power' induction hob.
